REGENERATIVE
PEPTIDES

GR 40mg

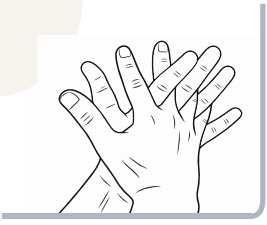

Regenerative Peptides GR provides 40 mg in an injectable pen. GR is a peptide that activates three hormone receptors: GLP-1, GIP, and glucagon. These pathways help regulate appetite, blood glucose, and energy metabolism.

Clinical trials have shown substantial weight loss and improved blood glucose control, raising interest in GR potential for treating obesity, metabolic disease and reducing inflammation.

Pen Diagram

How To Use Your Pen

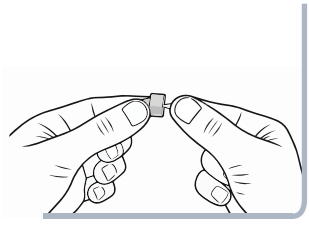

STEP 1: Cleanliness

After washing your hands sanitise the area of skin you wish to inject. Recommended is the abdomen, hips or thighs.

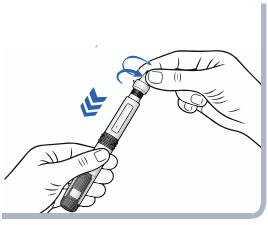

STEP 2: Pen Preparation

Remove the lid from the pen and inspect for any damage or leaks.

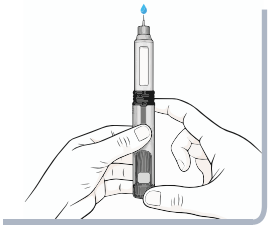

STEP 3: Needle Preparation

Select a pen needle from the box and remove the paper seal.

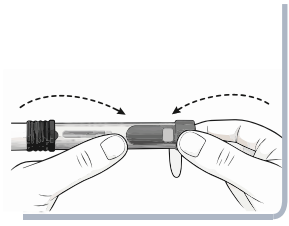

STEP 4: Assembly

- Holding the pen in one hand and the pen needle in the other.
- Screw the pen needle clockwise onto the end of the pen.
- Remove both the outer needle cap and safety cap from the pen needle and place them safely to one side. You will need these later for safe disposal of the needle.

STEP 5: Priming The Pen

- Hold the pen upright, a small drop of liquid should appear. if it doesn't keep the pen in an upright position and allow any air bubbles to rise to the top.
- Now turn your dial one click clockwise and depress the plunger. A small drop of fluid should appear. If not repeat the process until it dose.

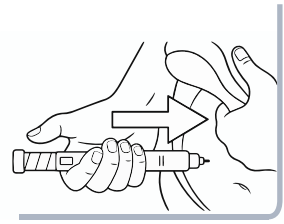

STEP 6: Selecting The Dose

After consulting the dosing chart overleaf, turn the dial clockwise until you have the desired dose.

STEP 7: Injecting

- After you have selected and sanitised the appropriate injection site, gently pinch the skin and insert the needle.
- Once the needle is fully inserted press the plunger all the way in until the dial reads zero. Count to 5 seconds before removing the needle.

STEP 8: Removing the pen needle

- Firmly place the outer needle cap back over the needle and turn anti-clockwise until the needle is fully unscrewed.
- Discard the needles and caps in a sharps bin and place the pen back into the refrigerator.

STEP 9: Storage

Refrigerate between 2° and 8° degrees Celsius. Do not freeze.

Dosing

Experienced users are advised to continue with their established dosing protocols. Novice users are advised to follow dosing protocol as outlined in the table.

Please note that the below table is for guidance only, there is no strict protocol, and users are encouraged to find their own ideal dose.

1 Click	=	0.125mg
8 Clicks	=	1mg
16 Clicks	=	2mg
24 Clicks	=	3mg
32 Clicks	=	4mg

No fixed dose exists for GR. Patients usually begin at 2 mg and increase by 2 mg every four weeks until the suitable dose is reached.

An initial 1 mg dose is advised to check for unwanted side effects before starting treatment.

FAQs

Q: I'm new to injections will this hurt? A: No, the needle is slightly thicker than a human hair, most individuals report no sensation whatsoever.
Q: I've left my pen out the fridge for a few days is it ruined? A: No, Regenerative Peptides pre-mixed solutions are stabilised and pH balanced. This extends the shelf-life and peptide potency for longer compared to our competitors. If the solution has become cloudy do not use.
Q: Can I use the same needle more than once? A: No, each kit comes with 10 pen needles. They are single use only. Insulin pen needles are widely available online and at your local pharmacy.
